What generator does the Damascus power station use

Overview

Why does Damascus need a diesel generator?

With most electricity generation plants down, many restaurants and businesses in Damascus rely on noisy diesel-powered generators. The fuel to run them is also in short supply in Syria.

Are private generators still used in Syria?

The use of private generators for electricity has been widespread for years in Syria, but expanded around Damascus in recent months amid signs of regime authorities moving to increasingly codify and regularize the informal trade. A fuel-operated electric generator sits on the sidewalk of a street in Damascus, 23/5/2023 (Sawt al-Asima).

Does Damascus still use amperes?

Damascus regained control over opposition-controlled areas of central and southern Syria in recent years, but the use of amperes has continued. Official institutions are not able to provide people with the electricity they need, and power rationing leaves many without electricity for many hours a day.

How often does electricity come to Damascus?

In most parts of Damascus and Reef Dimashq provinces, electricity comes for approximately one hour every five hours. In some areas, like the East Ghouta suburbs—besieged by the regime from late 2012 until spring 2018—state electricity can arrive for an hour a day, and sometimes not come at all for days in a row.
