# **What is a cascade energy storage power station**

## Overview

---

What is a cascade hydropower plant & pump station?

The CESS is an integrated system of cascade hydropower plants and pump stations, whose main function is to consume excess energy from renewables, while satisfying water and energy demands for the public. Essentially, the CESS belongs to a kind of pumped storage power station.

What is the efficiency of a cascade hydropower system?

The efficiency is defined as a ratio of reduced renewable energy curtailment to increased hydropower production, and it is calculated based on two scenarios (i.e., optimal operations of the cascade hydropower system and CESS). A case study using China's Longyangxia-Laxiwa CESS was conducted.

How many Cascade hydropower plants are in a cess?

In view of these, a larger scale CESS consisting of three or more cascade hydropower plants would be considered to further investigate its operation mechanism. Meanwhile, a long- and short-term nested operation model could be constructed to refine operating rules of the CESS. Long Cheng: Data curation, Conceptualization.

Why do we need large-scale and long-duration energy storage facilities?

However, despite the progress in policies and technologies for promoting the renewable energy integration, there still exists an urgent need to develop large-scale and long-duration energy storage facilities, which is driven by the rapid expansion of wind and solar energy sources.

## What is a cascade energy storage power station
