What is the lifespan of a flow battery

Overview

How long do flow batteries last?

Flow batteries are attractive to utilities due to their ability to discharge over longer periods—up to 10 hours—compared to other commercial batteries that typically offer one to two hours of discharge.

How long do vanadium flow batteries last?

Vanadium flow batteries boast a lifespan of up to 30 years, largely because they avoid the phase-to-phase chemical reactions that degrade materials over time, unlike lithium-ion batteries, which may last for about 8 years with daily cycling.

Why should you choose a flow battery?

Long life cycle: flow batteries have a significantly longer lifespan compared to many other battery technologies. This reduces the need for frequent replacements, minimizing waste and environmental impact. Recyclable components: many components of flow batteries, such as the tanks and pumps, can be easily recycled.

Are flow batteries more scalable than lithium-ion batteries?

Scalability: Flow batteries are more easily scalable than lithium-ion batteries. The energy storage capacity of a flow battery can be increased simply by adding larger tanks to store more electrolyte, while scaling lithium-ion batteries requires more complex and expensive infrastructure.
