# What type of battery is used to connect the inverter of the solar container communication station to the grid

✓ 100KWH/215KWH

✓ LIQUID/AIR COOLING

✓ IP54/IP55

✓ BATTERY 6000 CYCLES

## Overview

Can a battery be added to a solar PV system?

When adding a battery to an existing solar PV system, the system's inverter often needs upgrading to a 'hybrid' inverter, which is designed to work with batteries and the grid. The existing solar inverter can either be replaced or a second inverter added that is dedicated to the battery.

Do I need a battery for my solar system?

If your solar system uses microinverters (where a small, 'mini' inverter is installed under each panel), then you will need to install a battery with its own dedicated inverter (AC coupling). This option is relatively easy if you use a battery with an in-built inverter.

What is a grid-connected solar PV system?

Grid-connected solar PV systems, with or without a battery, are designed to switch off during a power outage, to protect those potentially working on nearby electricity lines. Standard solar battery systems also do not provide backup power when the grid fails.

How does a solar battery system work?

The energy stored in a solar battery system is used in the home whenever there is energy usage above the level produced by the solar panels (typically in the evening peak). This battery-stored energy can power home appliances before any energy is imported from the grid.
