Wholesale Iv switchgear panel in Australia

Overview

What is the difference between high voltage and LV switchgear?

The High Voltage (HV) Switchgears are designed to handle up to 350kV, while an LV switchgear is suitable for voltages under 1000V. If you're unsure whether a low voltage switchgear or high voltage switchgear best meets your needs, the team at Eaton can provide expert advice.

What are the components of a switchgear?

A switchgear generally consists of two main components: a power protector and switcher components that can disconnect power flow in the event of a fault. The main difference between a low voltage switchgear and the High voltage switchgear is the voltage operation level.

What types of LV switchgear are available?

The LV switchgear is offered in Form 1 through to Form 4b, front or rear connected, in either single or double sided arrangements. It is suitable for both indoor and outdoor applications with IP ratings from IP43 up to IP56. For more information on our LV Switchgear, contact us for a brochure or data sheet.

Who are the leading switchgear brands?

We work with leading global switchgear brands to deliver quality products that are fit for purpose and are delivered on time. ABB, Schneider, Terasaki and Efen are but a few. The company's strong electrical engineering structure is well supported by a production team that is focussed on reducing lead times for customers.

Wholesale lv switchgear panel in Australia

LV Electrical Control Panels

From Main Switchboards to PCC Panels, iEngineering delivers superior LV Electrical Control Panels tailored for your needs.

POWINS LV Switchgear

The range and size of the various plug-in, de-mountable modules offers an infinite selection, ensuring flexibility to meet specific customer requirements, whilst ensuring compliance to both ...

LAI Group , Leading Switchboard & Switchroom Manufacturer

Design & Construction and transportation of custom 33kV Switchgear room, 20m Control building, plus supply and installation of Control, Protection and Relay Panels.

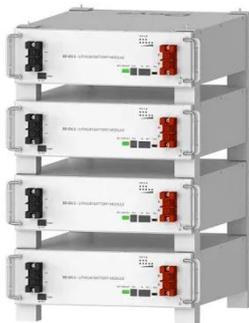

Switchboard Enclosures

A switchgear generally consists of two main components: a power protector and switcher components that can disconnect power flow in the event of a fault.. The main difference ...
