## Overview

---

Why is distributed solar PV important in Yemen?

As most of the population in Yemen live in rural areas and are geographically dispersed, it is costly to connect them to the main grid, making distributed solar PV solutions a critical part of any electrification strategy in Yemen. Figure 1 shows the photovoltaic power potential in Yemen. Figure 1: Photovoltaic (PV) Power Potential.

Is there progress on solar energy in Yemen?

However, progress towards this target has been non-existent. At the eighth Development Champions Forum (DCF) in Amman, Jordan, held from October 28 to Novem, the Development Champions therefore focused on solar energy in Yemen.

Why is the solar market threatening the sustainability of Yemen?

Combined with weak technical knowledge and capacity in the market and poor after-sale services, this vicious cycle has been threatening the sustainability of the stand-alone solar market in Yemen as consumers increasingly lose trust in solar- based systems and solutions after having negative experiences.

What is solar energy investment in Yemen IRG?

SCALING UP SOLAR ENERGY INVESTMENTS IN YEMEN IRG areas, consists of short-term contracts (often six months to one year) signed by the PEC with private companies, which own power stations consisting of small diesel generators and which supply electricity to the grid while the government supplies them with the fuel.
